Forecast for Tuesday 10 Sep 2024

Weather: Windy over the tops, and cloudy overnight and into the morning with spells of rain and drizzle for many parts. Rain becoming locally heavy for a time late morning but clearing into the afternoon to bring brighter skies. Becoming largely dry into the second half of the day with some sunny spells, but the risk of the odd shower into the evening and fresh blustery winds throughout will give a cold feel at height.

Chance of cloud-free hill tops above 800m: 20% during the morning increasing to 90% into the afternoon.

Low Cloud and visibility: Widespread cloud obscuring hills above 500-600m for much of the morning, though the occasional break possible. Cloud breaking into the afternoon as rain clears, with bases generally rising above summits. Visibility widely moderate through the morning, locally poor or very poor at height, but improving to become generally excellent into the afternoon, though some reductions to possible in any showers.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Strong west-northwesterly winds give a noticeable wind chill at height, with a risk of gale force winds across the highest peaks during the morning and some poor walking conditions likely as the early rain moves through. Despite the cooler conditions there will likely be some good brightness into the afternoon however with Moderate UV levels possible.

Forecast for Wednesday 11 Sep 2024

Weather: A cool breezy day with strong northwesterly winds. Sunny spells and frequent blustery showers expected, and with freezing levels close to summits some brief sleet or perhaps wet snow is possible over the highest tops.

Maximum wind: NW'ly 40-45mph gusting 50-55mph.

Chance of cloud-free hill tops above 800m: 70%.

Low Cloud and visibility: Scattered cloud with bases generally 800-1000m, falling briefly lower in association with showers, although cloud moving through very quickly. Visibility generally excellent but falling sharply in showers.

Temperature: **Valleys:** Plus 12 Celsius
At 800m: Plus 3 Celsius
Freezing level: 1200-1400m
